**General:** To be effectively filed with the Plant Variety Protection Office (PVPO), **ALL** of the following items must be received in the PVPO: (1) Completed application form signed by owner; (2) Completed exhibits A, B, C, E; (3) For a seed reproduced variety, at least 2,500 viable untreated seeds; for a hybrid variety, at least 2,500 untreated seeds of each line necessary to reproduce the variety; or for tuber reproduced varieties, verification that a viable (*in the sense that it will reproduce an entire plant*) tissue culture will be deposited and maintained in an approved public repository; (4) Check drawn on a U.S. Bank for \$2,705 (\$320 filing fee and \$2,385 examination fee) payable to "Treasurer of the United States" (See Section 97.6 of the Regulations and Rules of Practice). Partial applications will be held in the PVPO for not more than 90 days, then returned to the applicant as unfilled. Mail application and other requirements to Plant Variety Protection Office, AMS, USDA, Room 500, NAL Building, 10301 Baltimore Avenue, Beltsville, MD 20705-2351. **Retain one copy for your files.** All items on the face of the application are self explanatory unless noted below. Corrections on the application form and exhibits must be initialed and dated. **DO NOT** use masking materials to make corrections. If a certificate is allowed, you will be requested to send a check payable to "Treasurer of the United States" in the amount of \$320 for issuance of the certificate. Certificates will be issued to owner, not licensee or agent.

**ITEM:**

- 18a. Give: (1) The genealogy, including public and commercial varieties, lines, or clones used, and the breeding method.  
(2) The details of subsequent stages of selection and multiplication.  
(3) Evidence of uniformity and stability; and,  
(4) The type and frequency of variants during reproduction and multiplication and state how these variants may be identified.
- 18b. Give a summary of the variety's distinctness. Clearly state how this application, variety may be distinguished from all other varieties in the same crop. If the new variety is most similar to one variety or a group of related varieties:  
(1) Identify these varieties and state all differences objectively.  
(2) Attached statistical data for characters expressed numerically and demonstrate that these are clear differences, and,  
(3) Submit, if helpful, seed and plant specimens or photographs (prints) of seed and plant comparisons which clearly indicate distinctness.
- 18c. Exhibit C forms are available from the PVPO Office for most crops; specify crop kind. Fill in Exhibit C (Objective Description of Variety) form as completely as possible to describe your variety.
- 18d. Optional additional characteristics and/or photographs. Describe any additional characteristics that cannot be accurately conveyed in Exhibit C. Use comparative varieties as is necessary to reveal more accurately the characteristics that are difficult to describe, such as plant habit, plant color, disease resistance, etc.
- 18e. Section 52(5) of the Act requires applicants to furnish a statement of the basis of the applicant's ownership. An Exhibit E form is available from the PVPO.
19. If "Yes" is specified (seed of this variety be sold by variety name only, as a class of certified seed), the applicant **MAY NOT** reverse this affirmative decision after the variety has been sold and so labeled, the decision published, or the certificate issued. However, if "No" has been specified, the applicant may change the choice (See Regulations and Rules of Practice, Section 97.103).
22. See Sections 41, 42, and 43 of the Act and Section 97.5 of the regulations for eligibility requirements.
23. See Section 55 of the Act for instructions on claiming the benefit of an earlier filing date.

21. **CONTINUED FROM FRONT** – (Please provide a statement as to the limitation and sequence of generations that may be certified.)

22. **CONTINUED FROM FRONT** – (Please provide the date of first sale, disposition, transfer, or use for each country and the circumstances, if the variety (including any harvested material) or a hybrid produced from this variety has been sold, disposed of, transferred, or used in the U.S. or other countries.)

# Exhibit A: Origin and Breeding History

## Variety: ST 6636BR

ST 6636BR was derived from a backcross breeding program with the experimental cotton variety 7G104 (KC311 / 2H018) as the recurrent parent. The initial cross to incorporate Monsanto's Roundup Ready® (transgenic event 1445) and Bollgard® (transgenic event 531) genes and subsequent backcrosses were conducted by Stoneville Pedigreed Seed (now known as Emergent Genetics, Inc.).

In 2002, the BC3F2 plants were grown in Memphis, TN and screened for the presence of both events. Plants that were positive for both events were harvested and their progeny was planted in South Africa in as BC3F3 progeny rows in 2002. The progeny rows were screened in South Africa to confirm homozygosity for the Bollgard® and Roundup Ready® genes.

At maturity the BC3F3 progeny rows were visually evaluated for resemblance to the recurrent parent. Individual plants and bulks were harvested from rows that were homozygous for the transgenes and resembled the recurrent parent. The individual plants were grown as progeny rows in Maricopa, AZ, in May 2003, and evaluated for purity of the transgenes and agronomic traits. The bulk seed was used to conduct replicated trials to evaluate yield, fiber traits, and visual agronomic comparisons of the selected rows versus the recurrent parent.

Data gathered from the 2003 replicated testing and purity evaluations identified lines that looked and performed similar to the recurrent parent. These lines were evaluated further in 2004 replicated testing and evaluated for purity standards. ST 6636BR is a blend of these lines.

## Maintenance of the Variety

The variety will be maintained through pure line maintenance of breeder seed and production of foundation and registered classes of seed.

## Statement of Uniformity and Stability

ST 6636BR has been evaluated in many environments from 2003 to 2004 across the cotton belt by the staff of Emergent Genetics, Inc. and many public researchers. No off-types were detected and no variants were noted in the variety.

During this two year evaluation period, ST 6636BR was uniform and stable.

## Exhibit B: Statement of Distinctness

### Variety: ST 6636BR

ST 6636BR has an indeterminate plant growth habit, is tall in height, and has a strong, erect central stem. ST 6636BR is most similar to ST 4892BR however it has a longer fiber and is taller.

Trait	ST 6636BR	ST 4892BR
Fiber Length (UHM)	1.17*	1.11
Mature Plant Height (cm)	143.3	112.6

\* Values are means from replicated trials conducted in Albany, GA and Vienna, GA in 2004. Trials were conducted using a randomized complete block experimental design with four replications at each location.
